FOR IMMEDIATE RELEASE

Local HVAC System Cleaning Contractor Achieves Prestigious Certification

WASHINGTON, DC -11/12/1992 - Local contractor **Marshall Hoover** of **Hoover's Air Duct Cleaning Inc.** has successfully completed the examination process to be certified as an Air Systems Cleaning Specialist (ASCS). The certification, which is administered by NADCA – The HVAC Inspection, Maintenance and Restoration Association, is recognized worldwide as the hallmark of the HVAC cleaning industry's most qualified and reliable professionals.

"While achieving the ASCS certification takes commitment on the part of an HVAC professional, the certification itself is a commitment to consumers of reliable, best-in-class service," explained NADCA Executive Director John Schulte. "NADCA membership and the ASCS certification mean that a professional is dedicated to providing state-of-the-art service to their customers."

Marshall Hoover is now one of roughly 1,500 ASCS-certified professionals in the world.

HVAC system cleaning is the process by which heating, air conditioning, and ventilation systems are cleaned to remove excessive accumulations of dust, debris, and biological contaminants. With heightened public awareness of the dangers of indoor air pollution and the need for home energy efficiency, the demand for professional HVAC system cleaning has increased dramatically. The NADCA Certification Program helps to ensure that members of the association possess the required knowledge and expertise to perform these services in a competent and professional manner.

NADCA recommends that homeowners and building managers have their HVAC systems inspected annually and cleaned as needed. For more information regarding the benefits of professionally performed HVAC inspection and maintenance, contact **Marshall Hoover** at **Hoover's Air Duct Cleaning Inc.**

About NADCA:

NADCA – The HVAC Inspection, Maintenance and Restoration Association was formed in 1989 as the National Air Duct Cleaners Association, and has since expanded its mission to become a trusted advocate for consumers and the industry on environmental and health issues surrounding heating, ventilation and air conditioning (HVAC) systems. NADCA was the first organization to develop industry-standard best practices and its standard for "Assessment, Cleaning & Restoration of HVAC Systems" is used in more than 30 countries worldwide as a best practice and/or basis for national law. NADCA has more than 1,000 corporate members and more than 1,500 individuals certified as Air System Cleaning Specialists, Ventilation Inspectors or Ventilation System Mold Remediators. For more information or to find a NADCA-certified contractor near you, visit www.NADCA.com.
